ASSIGNMENT 2 — VENTURE APP BUILD BRIEF

VENTURE APPLICATION OBJECTIVE

Build an individual working application prototype based on your validated venture logic. This document defines the exact software specifications derived from your Venture Quest journey.

Venture Name
StudySync AI

Target User
Your Chosen Beachhead Segment * 2nd- and 3rd-year Undergraduate Pre-Med students taking Organic Chemistry and Human Anatomy at major research universities. (Why: This group faces an extreme volume of dense, memorization-heavy material where GPA stakes are critical for medical school admissions, making them high-intent early adopters.)

Core Problem
Students spend hours manually creating flashcards, summarizing lecture materials, and organizing study schedules rather than actively learning the content, leading to study burnout, inefficient preparation, and lower exam performance.

Jobs to Be Done (JTBD)
Facing an upcoming midterm or final exam with weeks of unorganized lecture slides, notes, and readings to review -> Instantly convert my raw course materials into structured, high-yield active-recall flashcards and practice quizzes -> Spend my limited study hours directly mastering the content and walk into exam day fully prepared without suffering burnout

Value Proposition
For Your Chosen Beachhead Segment * 2nd- and 3rd-year Undergraduate Pre-Med students taking Organic Chemistry and Human Anatomy at major research universities. (Why: This group faces an extreme volume of dense, memorization-heavy material where GPA stakes are critical for medical school admissions, making them high-intent early adopters.), who struggles with Wasting 4–8 hours weekly doing tedious, non-cognitive formatting work (copy-pasting notes into flashcards and writing manual quiz questions), leading to severe exam anxiety, delayed active study, and study burnout., our venture provides [product/service] that delivers [main benefit], so that [desired outcome].

Core MVP Features (Must Have)
1. Self-Service Booking & Direct Payment Checkout: Tests our core assumption about customer self-sufficiency and willing-to-pay conversion without manual intervention. (Solves: Allows customers to see real-time availability, select a time slot, and instantly lock in their booking with a payment.)

What Will NOT Be Included in Version 1
Native mobile apps (iOS / Android) — web-only responsive interface for V1.

In-app chat support or live messaging.

Advanced analytics dashboard or custom reporting tools.

Multi-language support and multi-currency billing.

Subscription/recurring membership plans.

Required Inputs from User
User credentials, business input variables, customer preferences, activity logs

Required Outputs / Display
Decision recommendations, calculated metrics, visual feedback, downloadable deliverables

Data That Must Be Stored
User profile, venture entities, session inputs, timestamps, status flags

Suggested User Flow
1. Onboarding & problem framing
2. User decision / calculation input
3. Value generation / result display
4. Save, export, or action completion

Validation Objective

Critical Assumption: Target customers have a strong enough desire for automated online booking that they will complete a payment and schedule an appointment without needing to speak to a human representative first.
